

SANDRO FILHO

FULLSTACK DEVELOPER

PROFESSIONAL PROFILE

Full Stack Developer specializing in dynamic and editable web applications using Django, Next.js 14, Tailwind CSS, and modern web technologies.

PROFESSIONAL BACKGROUND

Frontend Developer Intern - Rocky (07/2021 - 07/2022)

- **Creation of landing pages with VTEX IO** – Designed and developed high-converting landing pages for sales using VTEX IO, focusing on UI/UX and responsiveness.
- **Technical support** – Provided customer support, resolving issues and answering questions related to their e-commerce websites, ensuring smooth platform operation.

Junior Frontend Developer - Media.Monks (07/2022 - 01/2024)

- **E-commerce maintenance with ReactJS** – Maintained and optimized some of the largest e-commerce platforms in Brazil using ReactJS, Oracle and VTEX IO ensuring performance and scalability.
- **Created and led the 'No Portuguese' initiative** – Implemented a dynamic approach to encourage developers to improve their technical English skills through team-based practice.
- **Automation squad leader** – Developed Python-based automations to optimize internal processes, reducing workload and increasing efficiency across multiple departments.

Mid-level Full Stack Developer - Inframicro (01/2025 - Present)

- **School management system development** – Designed and developed a complete school management system, including attendance tracking, grade monitoring, and teacher registration.
- **Backend development with PHP and MySQL** – Built and optimized backend logic, ensuring efficient data processing and database performance.
- **Frontend development with jQuery** – Created interactive and dynamic interfaces using jQuery, improving user experience and system usability.
- **Project ownership and decision-making** – Took full responsibility for the system's development, making key technical decisions and improving overall performance.

SIDE PROJECTS

- **Som da Terra Store** – Designed the store layout and implemented custom JavaScript and CSS enhancements on the Loja Integrada platform to improve user experience.
- **Som da Terra Blog** – Developed a WordPress and PHP-powered blog to drive traffic to the store, including features that dynamically display relevant products based on post categories.
- **Aurora Systems** – Built a web system using Django, featuring a secure login area, product registration, and automated PDF quote generation.
- **My CMS** – Developed an editable Next.js website powered by Django REST Framework, allowing dynamic content management.
- **YouTube Tutorial** – Created a video series teaching how to build and deploy the My CMS project, sharing knowledge on Django and Next.js development.

STACKS

Django
